

# DCEVM Download and Installation Instructions

## Installation Steps:

1. Go to <https://guidewire.custhelp.com/app/resources/dcevm/documents>
2. Read through the license and click “agree” if you agree to the terms
3. Download dcevm-installer.jar and run the installer

If installing on Windows:

Click Windows button.

In the text box, type cmd but do not press Enter.

Right-click cmd.exe and click Run as administrator.

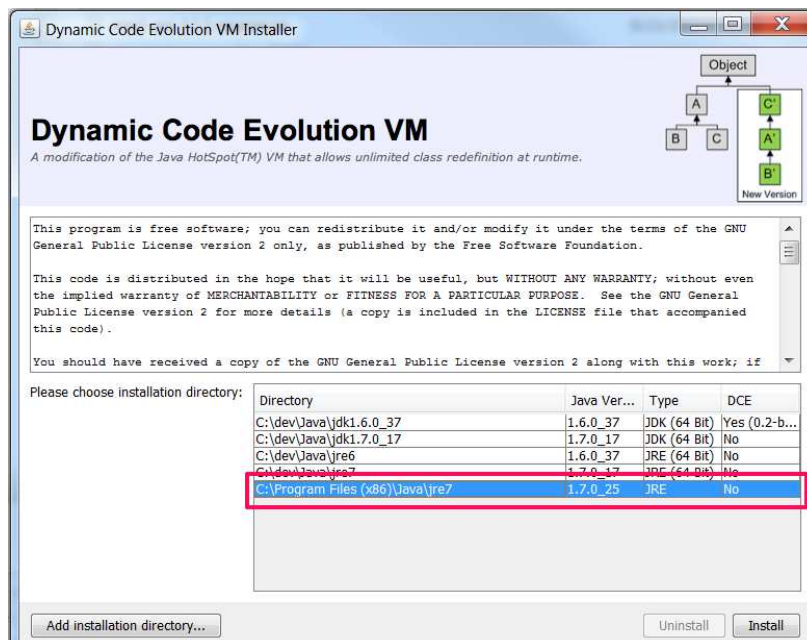

At the command prompt:

```
java -jar dcevm-installer.jar
```

A dialog appears. Follow the prompt to select a JDK/JRE for which you would like to add DCEVM features.

4. Select the jvm that you want to install the DCEVM to. This should be the jvm that you’re running your Guidewire development application.

We have tested with Java 7 update 25 and recommend using this version.

5. Click Install

The installer replaces %JAVA\_HOME%\jre/bin/client/jvm.dll and %JAVA\_HOME%\jre/bin/server/jvm.dll. The installer creates copies of the original jvm.dll files and names these files jvm.dll.backup. The installer also adds dcevm.jar to %JAVA\_HOME%\jre/lib/ext.
